

FAST REPORT

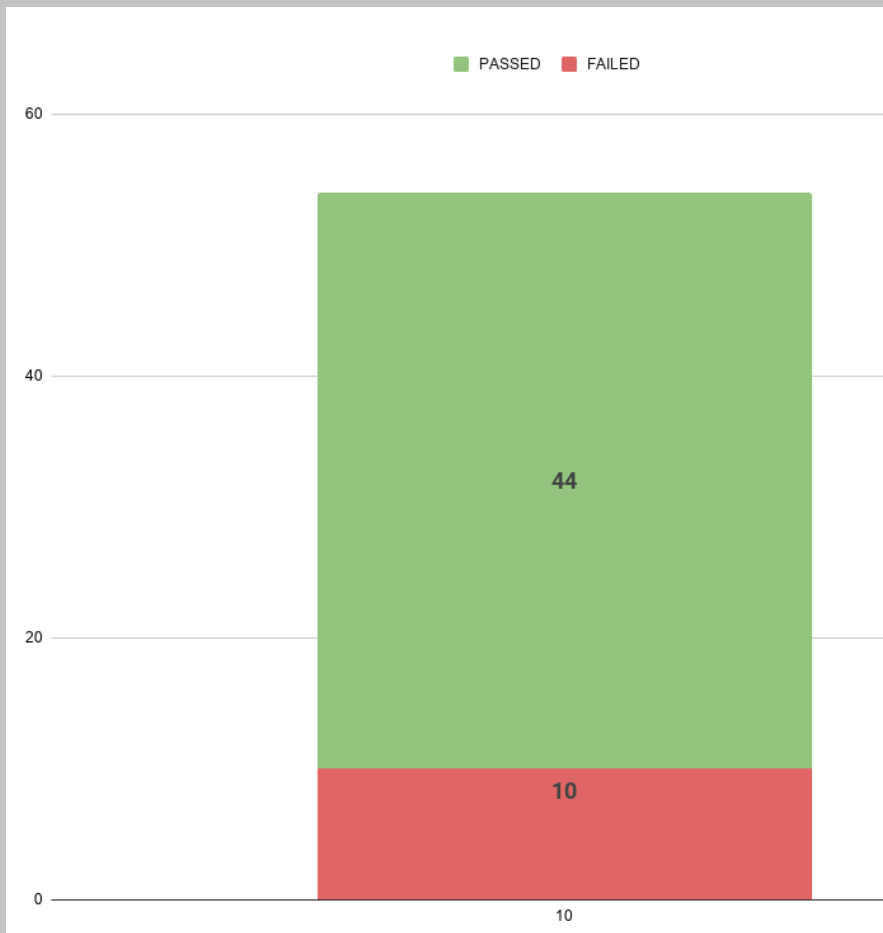

FAILED

According to the test plan criteria, the quality of the applicaton is less than expected.

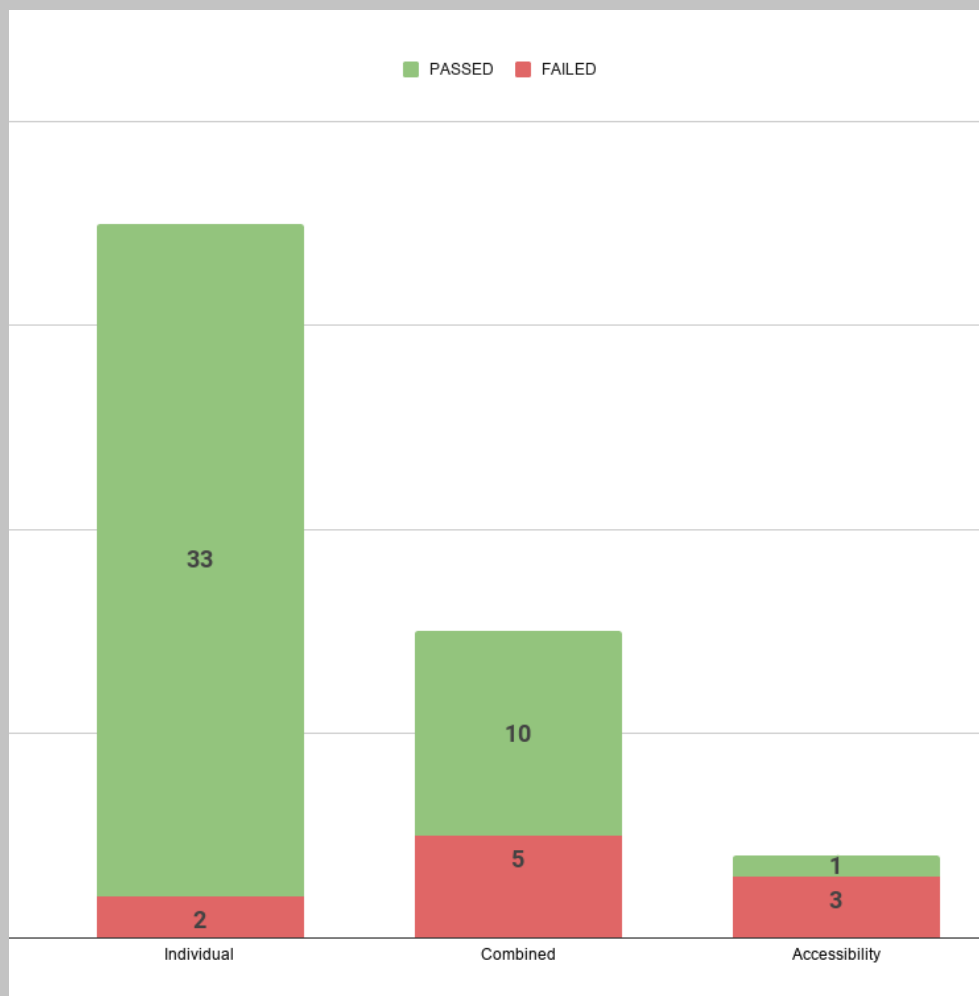

54 test cases were executed

- 35 were executed in individual features;
- 15 were executed combining different features;
- 4 accessibility testing were executed.

- 44 Test cases have passed
- 10 Test cases have failed

QUALITY OVERVIEW BY GROUP OF TESTS

FAILED TESTCASES

INDIVIDUAL #14: List feature

It was not possible to start the text using the List feature

INDIVIDUAL #30: List feature with numbers

Users should see the text as a list with numbers, however no numbers are shown.

COMBINED #6: Writing a text with one numbered list and one bullet list

Users should see the first two items in a numbered list and the second two items in a bullet list. However, no numbers are shown.

COMBINED #12: Writing a text: center alignment with numbered list

Users should be able to write a numbered list and position the list in the center of the text editor. However, the list is not showing the numbers.

COMBINED #13: Writing a text: right alignment with numbered list

Users should be able to write a numbered list and align the list to the right part of the text editor. However, the list is not showing the numbers.

COMBINED #14: Writing a text: justified alignment with numbered list

Users should be able to write a numbered list and justify it. However, the list is not showing the numbers.

COMBINED #15: Changing background color of a justified numbered list

Users should be able to write a numbered list, change the background color and justify the list. However, the list is not showing the numbers.

ACCESSIBILITY #1 #2: Using TAB

Users unable to physically use the mouse should be able to navigate through the website using tab.

However, many parts of the system are not reachable using TAB, which highly impacts the accessibility factor of the application.

ACCESSIBILITY #3: Using ScreenReader to change the color of the text

Visually impaired users should be able to navigate through the system using screen readers. However, although it is possible to understand the system because the editor buttons have tooltips, the colors do not have tooltips as well as the alignment options. Thus, this task could not be completed.
